

# Prasad Jadhav

9082554518 — pj344504@gmail.com — Portfolio — GitHub — LinkedIn

## PROFILE SUMMARY

---

DevOps and Cloud fresher with hands-on internship in network monitoring, infrastructure automation, and secure network design. Comfortable working with Linux, AWS, Docker, and Kubernetes and have built several personal DevSecOps and Kubernetes projects to learn CI/CD tools like Jenkins, ArgoCD, Trivy, and Terraform. Interested in roles where I can grow into secure CI/CD, monitoring, and deployment work.

## TECHNICAL SKILLS

---

**CI/CD & Automation:** Jenkins, GitHub Actions, ArgoCD, SonarQube, Trivy, Git

**Cloud & Infrastructure:** AWS (EC2, S3, VPC, EKS, IAM, Lambda), Kubernetes, Docker, Kustomize, Helm, Terraform

**Security & DevSecOps:** SonarQube, Trivy

**Monitoring & Observability:** Prometheus, Grafana

**Programming & OS:** Python, JavaScript, Linux (Ubuntu), CCNA Networking Concepts

## EDUCATION

---

**MGM College of Engineering, Navi Mumbai**

2022 – 2026

*Bachelor of Engineering in Electronics & Telecommunication*

## INTERNSHIP EXPERIENCE

---

**Network Infrastructure & OFC Support Intern**

Jun 2025 – Jul 2025

*Central Railway, CSMT Mumbai*

- Reviewed railway OFC infrastructure and flagged vulnerabilities; suggested upgrades that improved reliability by about 15%
- Documented telecom infrastructure procedures and troubleshooting steps for the team
- Got hands-on with Linux CLI for network monitoring and supported change management work

## HANDS-ON PROJECTS

---

**EasyShop – DevSecOps & AWS EKS Deployment**

- *Stack:* Jenkins, Docker, SonarQube, Trivy, Amazon ECR, Amazon EKS, Kubernetes, AWS ALB, IAM
- Built an end-to-end CI/CD pipeline in Jenkins integrating SonarQube (code quality) and Trivy (vulnerability/secret scanning) for a DevSecOps workflow
- Containerized the application with Docker and automated image builds/publishing to a private Amazon ECR repository
- Deployed and orchestrated the app on Amazon EKS using Kubernetes Deployments, Services, and Ingress, exposed publicly via AWS Application Load Balancer
- Configured Horizontal Pod Autoscaler (HPA) to auto-scale pods (1-10 replicas) based on CPU utilization, and set up dedicated IAM roles for secure AWS access

**End-to-End DevSecOps Pipeline (Wanderlust Project)**

- Built a CI/CD pipeline with Jenkins, Docker, and Kubernetes for a sample application
- Added SonarQube and Trivy scans into the pipeline to catch code and dependency issues early
- Used ArgoCD for GitOps-style deployments with rollback support
- Set up Prometheus and Grafana for monitoring and alerts
- Deployed the complete pipeline on a local Kubernetes cluster and validated end-to-end functionality

## CERTIFICATIONS & TRAINING

---

Cisco CCNA (200-301) – In Progress (*RST Forum, Dadar*)
